

Task 70: Group Anagrams

Problem Description

Given an array of strings `strs`, group the anagrams together. You can return the answer in any order. An Anagram is a word or phrase formed by rearranging the letters of a different word or phrase, typically using all the original letters exactly once.

Java Solution

```
class Solution {
    public List<List<String>> groupAnagrams(String[] strs) {
        Map<String, List<String>> map = new HashMap<>();

        for (String str : strs) {
            char[] chars = str.toCharArray();
            Arrays.sort(chars);
            String key = new String(chars);

            map.computeIfAbsent(key, k -> new ArrayList<>()).add(str);
        }

        return new ArrayList<>(map.values());
    }
}
```
