

Task 51: Kth Largest Element in an Array

Problem Description

Given an integer array `nums` and an integer `k`, return the `k`th largest element in the array. Note that it is the `k`th largest element in the sorted order, not the `k`th distinct element. Can you solve it without sorting?

Java Solution

```
class Solution {
    public int findKthLargest(int[] nums, int k) {
        PriorityQueue<Integer> pq = new PriorityQueue<>();
        for (int num : nums) {
            pq.offer(num);
            if (pq.size() > k) {
                pq.poll();
            }
        }
        return pq.peek();
    }
}
```
